**Brescia**

Food safety and food security are interrelated concepts with a profound impact on quality of human life. Many external factors affect both of these areas. This intensive 5 day Summer School will provide students with a broad perspective on the societal and scientific challenges of food security - to assure that all people have access to enough food to lead active and healthy lives- and of food safety from a chemical, microbiological and nutritional aspect. This course aims to offer a multidisciplinary understanding of food safety and security issues in urban contexts of food poverty while meeting the growing need for a new generation of well-rounded academics, professional and policy makers.

In collaboration with the Ordine dei Dottori Agronomi e Forestali di Brescia
